

PENETRATION TESTING

Penetration Testing is the process of simulating real-world attacks by using the same techniques as malicious hackers. Penetration Testing is one of the comprehensive ways for an organisation to develop an understanding of the cybersecurity risks of their systems and information from a malicious attacker trying to access their networks, hardware/IoT, web applications, and mobile applications. This allows the organisation to strategise the management and remediation of vulnerabilities to reduce the overall risk to their business and sensitive data.

INFOTRUST'S PENETRATION TESTING SERVICE

Our Penetration Testing services comprises testing of infrastructural, application, mobile and hardware components of an organisation from an attacker's viewpoint. This service comprehensively identifies the risk associated with a business' configuration and environment weaknesses.

WEB APPLICATION TESTING

INTERNAL NETWORK TESTING

EXTERNAL NETWORK TESTING

WIRELESS NETWORK TESTING

MOBILE APPLICATION TESTING

HARDWARE/IOT TESTING

OUR METHODOLOGY

InfoTrust uses a mix of manual and automated testing techniques in an attempt to gain access to the system and/or sensitive data on the system.

GAIN ACTIONABLE INSIGHTS

Our security consultants are CREST and OSCP certified and can provide actionable insights into:

Detecting and remediating weaknesses that could allow a compromise

Ensuring user privileges cannot be misused

Mitigating the impact of a malicious or disgruntled employee

Facilitating compliance with regulations like PCI-DSS and more

Improving security strategy through a long-term roadmap

Identifying attack paths that could remain unseen without a penetration assessment

To find out more about how our Penetration Testing Services can proactively harden your organisation's IT infrastructure against cyber attacks contact our team today for a free, no-obligation consultation.

TEST YOUR DEFENCES BEFORE ATTACKERS DO

INFOTRUST ADVANTAGE

InfoTrust's penetration testing employs the ingenuity of human intellect to expose the effectiveness of an organisation's security controls in real world situations against skilled hackers. InfoTrust employs ethical hackers certified by organisations such as CREST and OSCP. Our penetration testers use real world threat modelling, performed before executing attacks, using tactics and procedures that closely emulate established threat actors.
